Each archaeological trace means one or more activities of El Mnasra groups. Starting from the seven finds discovered in this site and which means one or more behaviors of the modern human, we have distinguished 40 activities of the mnasraouis. Each of them is necessary to the satisfaction of one or more needs. Referring to the work and classifications of contemporary psychologists, we were able to determine the relationship between these different parameters and to quantify them graphically. This allowed us to better understand the relationship between these different ones and their importance.

**Mots-Clés:** Modern Behaviour, Aterian, El Mnasra Cave, Morocco
